

MOBILE BRIDGE - ACCESS RAMP

The mobile access ramp bridge ramp is a transportable solution, ideal to resolve temporary situations where there's the need to overcome up to four steps.

It is a flexible and mobile solution for every need for mobility. The customer can choose the length and the width of the ramp, creating a product that satisfies his needs; **max. length is 405 cm.**

The structure has the important characteristic of folding together and being portable.

The functioning of the removable aluminum wheel carriage is very easy and practical; the ramp is positioned on the steps only when being used, otherwise the ramp is stored in a garage, under-stairs or lumber-room, to leave the entrance always free. Moreover, the same ramp can be used for different entrances with similar gradients.

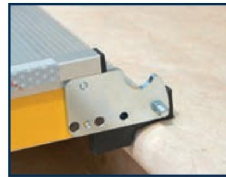

The ramps **needs no installation** and will be shipped ready for use.

L-positioning

Optional Hand railing

Gradient support

Hole for optional fixing

Handling system: 4 feet and 2 wheels

CHARACTERISTICS:

- Anti-slip and anodized aluminium
- Adjustable feet and wheels
- Foot barrier – anti-fall (h. 6cm)
- Capacity: 400 kg/m²
- Customizable width (from 80 to 120 cm)
- Customizable length (from 230 to 405 cm)
- Weight: 40 kg/m²
